

Importance of University system for a Sustainable Development in Sri Lanka

Nalin Abeysekera
(nalinabeysekera@gmail.com)
Open University of Sri Lanka,
Nawala, Nugegoda,
Sri Lanka

- Literacy rate is
92%

- From advance level only 10% enrolled to the University system

This study

- **This study is going to examine the factors which going to consider as hindrance for the higher education in Sri Lanka.**

Methodology

- The content method and the interview method has been used for the study

Universities

- **The curriculum development for the courses like arts in degree level is not up to accepted standards. The syllabuses are too old to cope up with current job demand**

- **This paved the way to unemployment, youth unrest etc...**

- **policy problems from the ministry level and lack of coordination in different sectors can be considered as main concern.**

- The motivation of academics in the university also can be considered as independent factor for the successful partnerships.

- That is the mere reason for most of the academics been selected an option of migrating!!

- **The research conducted for the higher grades (like masters) has lost its direction.**

- **There is no vision or policy for the future in conducting research and dissemination of knowledge (this should be one expectation of the University system) in Sri Lanka.**

- **There is no
proper University
–industry
partnership**

- **No**

Education

policy!!!

- **The importance of University education should be considered as focal point in Sustainable development in the country**

Still it(university
education) has
lost the direction
in Sri Lanka!!!

Thanks!!!

Any Questions??
